# Performance Testing Report - Benchmarking Test: 200Vusers

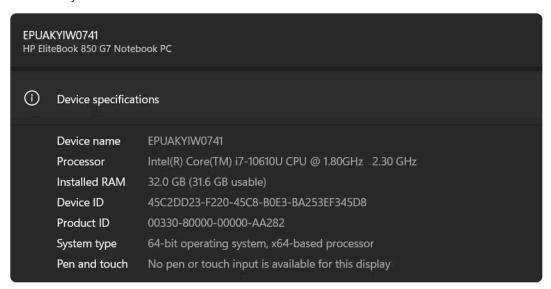

Tester: Yan Bareisha

Date: 2024-08-29 01:16:41

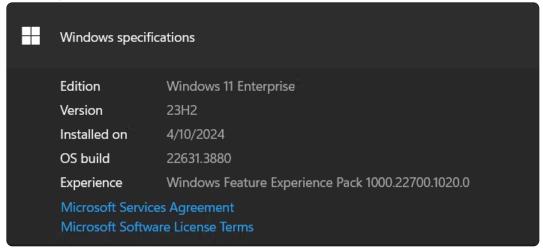

## **SUT:**

• 1 Machine: CPU i7-10th generation

· Memory: 32GB

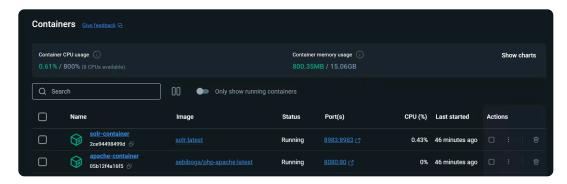

Operating system: Windows 11 Enterprise

## **Dockerized 2 containers:**

solr-container: 15.06GB RAM, CPU 0.38%
apache-container: 15.06GB RAM, CPU 0.01%

**Containers:** 

#### IPs:

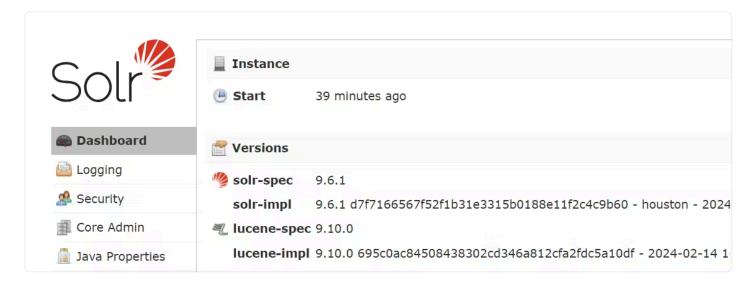

-apache-container --network mynetwork --ip 172.18.0.11 -d -p 8080:80 -v

-solr-container --network mynetwork --ip 172.18.0.10 -d -p 8983:8983 -v

Note: The machine is connected to the Internet via WIFI.

Application: Apache SOLR

**Build Version: 9.6.1** 

# **Test scenario:**

• Select 1 job out of 250.000.000 from apache SOLR

# Performance test scenario:

· Workload: 200 VUsers;

• Ramp-Up: 60 sec;

• Duration: 15 min.

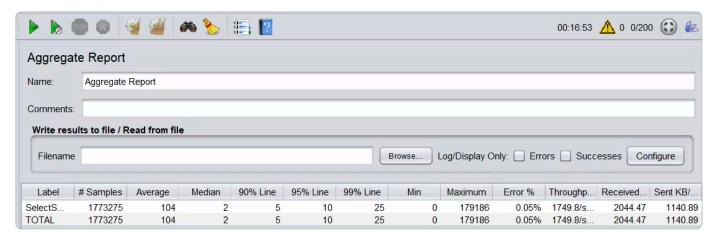

# **Test scope:**

- Error rate <0%;
- CPU < 85%

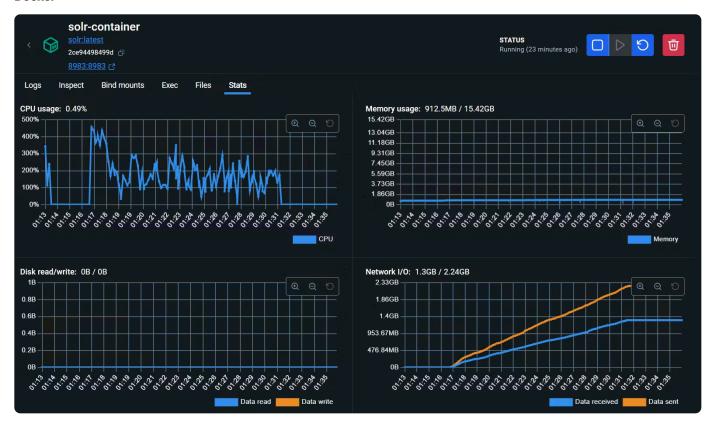

• Memory <95%

## **Test results:**

## **JMeter Aggregated Report:**

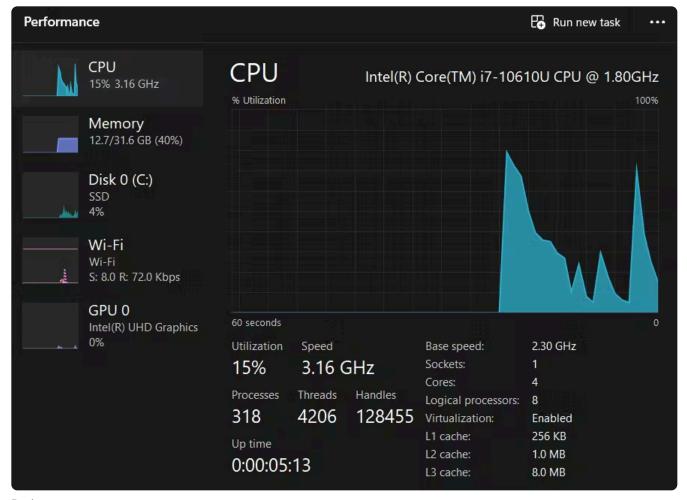

## **Docker**

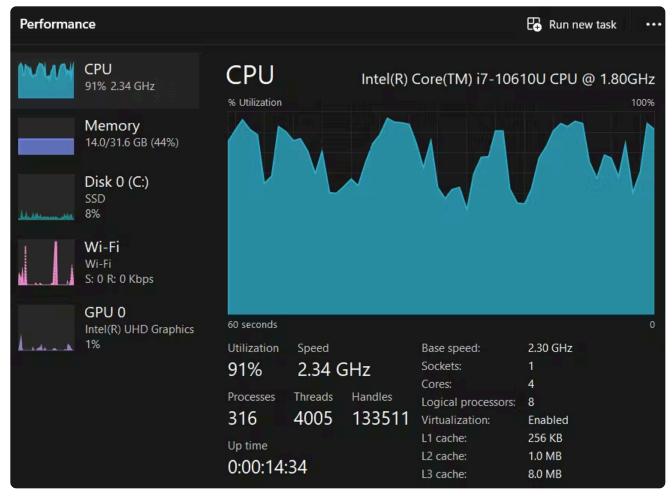

**System Performance** 

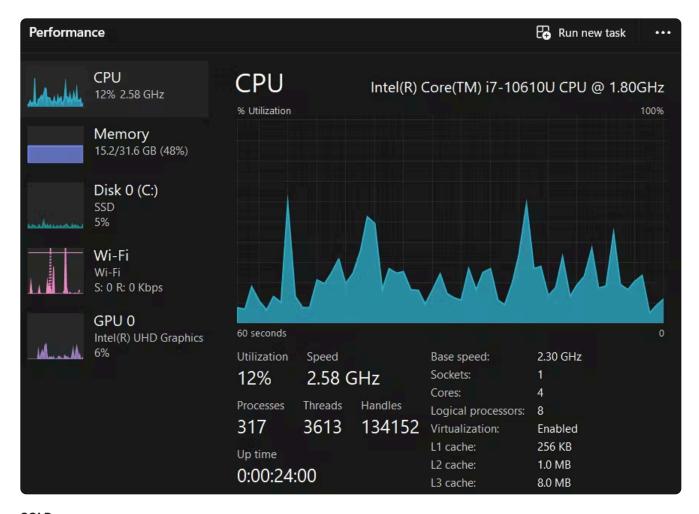

Before:

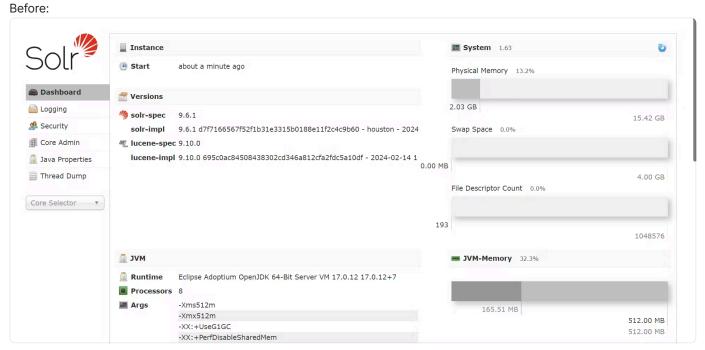

During:

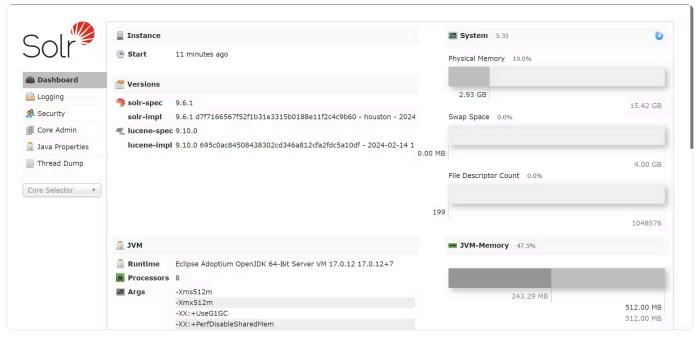

After:

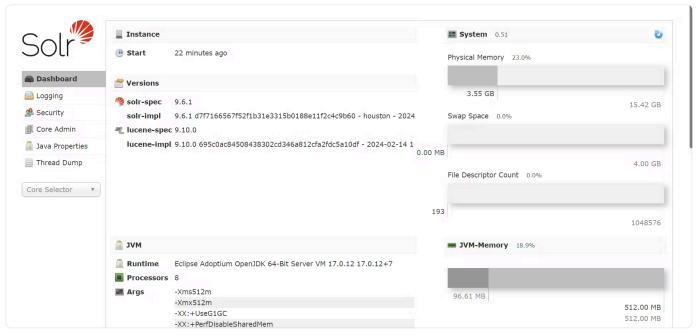

## SOLR

During:

## After:

# **Conclusion:**

- Error rate is 0.05%;
- CPU consumption is 100% during the test;
- Memory consumption <60%.

The benchmarking test showed errors during test run. Number of VUsers should be decreased. CPU load should be taken into account.
